

The most INCREDIBLE 1981 Avanti, on the Planet !!

1981 Avanti that has been maintained "to the nines", since day 1. This is probably the finest original 1981 on the planet.

I purchased this 1981 Avanti as a dealer to resell in about 1989. I don't recall how many miles it had on it. I do recall how incredibly clean and maintained it was. You could tell it was pampered as it came with a front bra, sheepskin covers on the light gray leather Recaro seat and floor mats on top of the factory floor mats. This Avanti was about 8-9 years old, but would pass for new. The underside was as new, you could tell it hadn't seen any fowl weather. My wife, Betty wanted to keep it, so we did.

A local gentleman, after months, finally convinced Betty to sell him this very special 1981 Avanti. That was over 30 years ago. He absolutely loved this car and continued to maintain it "to the Nines". When he passed away, I purchased it back for Betty from the family. It now has 95,000 miles on the odometer. Your best guess might be 5000-10,000 miles. It's that nice and original. It basically had every available option that Avanti Motors offered.

The original special Mercedes Orient Red paint is still absolutely incredible. It has become thin in some spots from so much waxing over its 41 years. It does have some minor chips that have been brush touched and some other small minor blemishes. The chrome is excellent with the exception of the drivers die cast chrome vent assembly, which has what I call weak chrome.

Why restore one, when you can buy an original that's this nice!

NostalgicMotorCars.net

The Eagle Ottawa light grey leather interior featuring light gray sued door and quarter panel inserts is in absolute incredible condition. The optional Italian Ash wood dash/console is as new condition. This Avanti was ordered with just about every option available, including the very rare Blaupunkt CR-3001 am/fm w/cassette, extra large TS-694 rear speakers, TS-107 front speakers and also has the very rare factory CB radio, with the CB electric antenna. I replaced the power CB electric antenna with a factory replacements manual antenna, because this original CB antenna are extremely rare that still work and it can be put back in for shows, in about 5 minutes. I replaced the original wire wheels back in about 1989 with factory wire wheel covers because the wire wheels from about 1972-1982 were very, very prone to flat tires. This Avanti had the catalytic converter removed, when I purchased it in about 1989. It has a muffler shop dual exhaust system on it. It comes with a N.O.S. Nostalgic Motor Cars aluminized exhaust system in the trunk. Your choice of glass pack or quiet tone mufflers.

\$32,000.00
